Summary

Software Engineering student at FIAP and Software Development Intern at Genova. Build recruitment applications, WhatsApp integrations, and AI screening workflows with React, TypeScript, PostgreSQL, Supabase, and n8n. Previous freelance work with Next.js and Cypress. Seeking full stack opportunities, with personal projects in Rust and C++ on Linux.

Experience

Software Development Intern | Genova Jul 2026 to present

- Built WhatsApp outreach and messaging inside the recruitment portal using Gupshup, Supabase Edge Functions, and PostgreSQL, including incoming messages, delivery tracking, and recruiter replies.
- Developed AI candidate screening with vacancy lookups, conversation stages, and recruiter handoff. Added semantic checks and a correction attempt to guard against repetitive questions.
- Hardened PostgreSQL/Supabase message workers with duplicate-processing protection, retries, interrupted-job recovery, and ownership checks to coordinate automated and recruiter responses.

Freelance Frontend Developer | Westpoint Mar 2025 to May 2025

- Built responsive, accessible interfaces with React, Next.js, TypeScript, and Mantine, translating Figma designs into reusable components.
- Integrated REST APIs for dynamic interface updates and implemented end-to-end tests with Cypress for critical application flows.

Selected projects

PlumCrate
github.com/VitorCesarinoMarchese/PlumCrate · plumcrate.vercel.app

Open-source Sims 4 mod manager for Linux in Rust with egui/eframe. Folder/ZIP imports, mod activation, recoverable trash, and CurseForge integration. AppImage updates verify downloads and support rollback. First alpha in development.

L.A.R.P.
github.com/VitorCesarinoMarchese/larp

Experimental C++23 screen streaming over UDP with PipeWire, FFmpeg H.264, and SDL3. Adaptive bitrate, libsodium-authenticated sessions, and restart recovery verified between two Linux machines over Tailscale. Includes integration tests, sanitizers, and memory measurements.

Technical skills

Frontend: React, TypeScript, Next.js, Tailwind CSS, Mantine, HTML/CSS

Backend: Node.js, Express, Go, REST APIs, WebSockets, JWT

Data & automation: PostgreSQL, SQLite, MongoDB, Supabase, n8n

Systems & desktop: C, C++23, Rust, UDP, FFmpeg, PipeWire, egui

Tools & testing: Git, Linux, Docker, CMake, Cypress, Vitest, Figma

Languages: Portuguese, native · English, fluent

Education

FIAP | B.Sc. in Software Engineering, in progress
2024 to 2027, expected

FIAP School | Technical High School, Web Development
2021 to 2023
